

NUMERICAL ALGEBRA, CONTROL & OPTIMIZATION

ISSN 2155-3289
eISSN 2155-3297

ABOUT JOURNAL

Numerical Algebra, Control and Optimization (NACO) aims at publishing original research papers in applied mathematics, with focus indicated by the journal title. Topics of interest include the following: numerical linear algebra (linear system of equations, least squares problem, matrix decomposition, eigenvalue problem, etc.), matrix and tensor approximation, non-linear system of equations; analysis of control systems (controllability, observability, stabilizability, etc.), optimal control (variational method, dynamic programming, infinite dimensional and stochastic problems, etc.), differential games (of two-person, multi-person, mean-field, etc.), numerical aspects of control problems; linear, quadratic, non-linear, convex and nonconvex programming, complementarity and variational analysis, combinatorial, discrete, and stochastic optimization. Special application interests include artificial intelligence, data sciences, machine learning, and mathematical finance that are related to the scope of the journal in the broad senses. The journal also welcomes expository submissions on subjects of current relevance. The publication in NACO is free of charge.

- NACO publishes 4 issues a year in March, June, September and December.
- NACO publishes online only.
- NACO is archived in Portico and CLOCKSS.
